# the **PRESERVE**

RETRACTORLESS • ASSISTANTLESS • DAA

THE FIRST RETRACTORLESS, ASSISTANTLESS ANTERIOR HIP APPROACH ELIMINATING SOFT TISSUE AND BONE INJURY CAUSED BY RETRACTORS.

NEXTSTEP "HELPI"

[www.nextsteparthropedix.com](http://www.nextsteparthropedix.com)

With The Preserve by NextStep, we've created a revolutionary new hip replacement procedure. It's the first retractorless and assistantless anterior hip approach that eliminates soft tissue and bone injury caused by retractors. The Preserve decreases the number of assistants required for a procedure, improves operational efficiency, and ultimately maximizes surgical reproducibility.

- Requires one less person in OR
- No disrupted soft tissue from retractors
- Compatible with Athello table and competitors' DA tables
